OPPORTUNITIES ABOUND, BUT SO DO RISKS

The Iran/US war is a tragedy that could get worse. But you cannot get away from the fact that in small caps, world trouble and strife bring opportunities. We bought you numerous opportunities in Covid where stocks were oversold. Stocks like Tuas (TUA), Pilbara Minerals (PLS), Southern Cross Electrical (SXE), Nick Scali (NCK) and Afterpay delivered many multiples on where we advised to buy them. What we are doing is bringing you stocks that are at better prices or valuations than would otherwise be the case. You only need one or two good ones to make the material difference to your portfolio returns.

This issue contains a number of buy recommendations, which includes stocks we have taken profits on at higher level. **Catapult Sport (CAT)** has a global customer base of professional sports teams using its wearable sports technology.

The stock has been literally like a yo-yo. A trading update last week sent the stock towards $4 intraday, but the subsequent two sessions sent the stock down to below $3 and now it sits in the middle. A handle on valuing the stock is very important and we think this is an opportunity. However, another factor is that it has exited the S&P/ASX 200 Index.

We like the stock but caution against over-committing. If you go too hard, you haven't got money in the bank for reflection. If it goes against you, you have another look. Investing is not all or nothing.

It's incremental advances and retreats. Catapult is at an important juncture in its life cycle, where positive cash flow needs to translate to profit growth. It's a big business entering a niche opportunity, but there is multiple room for mis-steps.

BEST STOCKS TO BUY NOW

These stocks are quality companies that we believe offer great return potential for the risks face.

SMALL TALK

"We like the stock but caution against over committing. If you go too hard, you haven't got money in the bank for reflection."

Similarly, **Paragon Care (PGC)** is at a critical point in time. The med-tech distributor is paying the price for a hectic merger strategy, which combined three complex businesses in 18 months. The stock price bouncing around record lows at below 20 cents.

If the group can reduce debt and reach its guidance of EBITDA over $100m, this stock should be re-rated. This is what many stockbrokers are saying. But this work out may involve an equity raising at 10-12 cents a share, which is where the opportunity might be. You don't just jump in when a stock looks cheap!

Calculating the risk-reward is all-important. This is why over 15 years our investment process focuses around risk more than reward. Protecting your money is as important as making big returns.

GOLD GOING RISK-ON

What does gold have in common with Bitcoin? A lot! Neither produce anything (much); they have a (relatively) fixed supply; and are turning into meme trades, which means they ebb and flow along side risk appetites. When it's hot it's hot, when it's cold, get out. There is one important difference, though, which highlights why gold is a much safer bet.

Not immune to the laws of physics

3-year price of $US and $AUD gold per ounce

Nothing was more inevitable than the correction of the gold price eventually, retracing some part of the very significant gains that had been shown since the precious metal took off from a base of around US$2,000 in early 2024.

The further acceleration in 2025 as the trade grew more popular meant that a reality check was overdue. Gold has stabilised above US$4,000, which still represents a fantastic performance over the past 6 to 9 months and there is room for more consolidation or weakness. But this is a buying opportunity!

$US Gold Price in the past 3 years

$AUD Gold Price in the past 3 years

GOLD: Positive in the long-term but short-term risks remain

Since Trump's Gulf War began on 28 February, gold has plunged by about 15%, more than global equities. But there are significant factors in gold's favour. As many point out, gold is akin to an inflation-linked bond with a zero coupon.

The metal delivers no income, but the value of the principal has historically held up against rising prices. Hence, if bond yields rise, gold loses appeal. Since the US began bombing Iran, the yield on the benchmark US10 year treasury bond has climbed from below 4% to over 4.3%.

GOLD: Positive in the long-term but short-term risks remain continued.

Gold's weakness was triggered by the strength of the US dollar, the metal becoming more expensive in other currencies, causing falling demand. The greenback was supported by a realisation that the US is in the strongest energy position relative to its main competitors, which are all big importers and include the Euro, Chinese Yuan, as well as the energy-challenged Japanese Yen. Added to this, there has also been profit-taking by central banks, including Poland and Turkey.

Gold may weaken and trade below US$4,000, but if anything, this would provide a buying opportunity. This is not the end of bullion's extended bull run, in our view. Our expectation is for higher prices over the next few years for the simple reason that many countries' deficits will widen.

Gold's chief historic appeal is not as protection against Gulf wars, or even an energy shock, but against the debasement of money. This is a giant risk amid mounting public debts, which governments may seek to inflate away. The US might have signalled that it wants out of Iran, but nobody believes that this will be the end of the Middle East conflicts – watch the behaviour of Israel and Iran. These combatants are not going to take their foot off the gas.

Another factor to consider is the ongoing memeification of commodity markets. ETFs and instant access to trading platforms allow retail investors to almost instantaneously jump on board the speculation of the day, starting with the original meme stock, Gamestop, more recently parsing into gold trades, then silver, and even more recently in oil. The impact of ETFs and retail traders is not easy to define but it definitely has an impact.

INVESTORS:TRADING ACTION

Gold stocks will by necessity remain hostage to the gold price, and could well disappoint, given increased costs from the diesel shock as well investors' disappointment that higher for longer prices are not sustained. The key is a strong balance sheet.

Our favourites are **Ramelius Resources (RMS)** and **Westgold Resources (WGX)**. $RMS has been particularly resilient, but both have super-strong balance sheets and production profiles that are poised to grow in the near term.

Our experience with **Pantoro (PNR)** and on the gas side with **Amplitude Energy (AEL)** shows that having balance sheet strength, with heaps of cash and not much debt, low cost of production and good grades isn't always enough. You need diversification. You need each stock you own to be diversified by mine, by location and even in some cases by commodity.

Ramelius Resources

SECTOR METALS & MINING

INDUSTRY GOLD

Gold Updates

What's New?
One of the most resilient gold producers in the war-induced sell-off. RMS is 37% off recent highs amid supply chain and fuel disruption, but the underlying business and balance sheet are strong. Guidance for the year remains close to 200k ounces at a cost (AISC) of $1,700-1,900/oz versus the current gold price of US$4,677/oz (A$6,774). Even at the higher end of cost guidance, Ramelius is at the lower end of the cost curve, which implies strong operating cash flows. This is being reinvested into projects including the underground development at Never Never and the Mt Magnet plant expansion, increasing throughput from 2Mtpa to 5Mtpa. RMS has cash and bullion of $694m and no debt.

Bull Points
- Multiple growth assets that will provide scale
- Exploration budget for success

Bear Points
- Higher costs from trucking ore
- Development risk

Analysis: The interim (1h26) earnings (EBITDA) rose 13% to $347.7m; operating cash flow was $311.6m. This was despite gold sold falling significantly to 100,304oz from 143,032oz a year earlier, after Edna May was put on care and maintenance. The removal of the relatively high-cost production from Edna May and a realised gold price 36% higher to $4,822/oz maintained profitability and expanded margins; the EBITDA margin increased 11% to 72%. It was also after the signficant headwind of Spartan related acquisition costs.

Developments include the Never Never underground in Dalgaranga, which is on budget: $76m for Never Never, plus $82m for infrastructure. First ore was delivered to Mt Magnet on 18 February 2026, with higher-grade ore planned to enter the blend in the June 2026 quarter. The Mt Magnet mill expansion has been approved with planning and early works underway. Completion is targeted for the September quarter 2027 at a capital cost of $223m. The next major standalone project, Rebecca-Roe, is dependent on permitting, with initial capex of $340m, with construction in the December 2027 quarter and completion in the December 2028 quarter.

Portfolio Risk Rating
GROWTH. Making good money with the gold price at current levels. Development has gone well but the big investments are getting closer, increasing risk.

Radar Rating
Incremental growth is being realised at existing operations with longer-term prospects remaining on track.

UNDER THE RADAR small caps

ISSUE 696

Westgold Resources

SECTOR METALS & MINING

INDUSTRY GOLD

Gold Updates

What's New?
The mid-tier West Australian gold producer's share price has gone from over $8 to below $5 and then over $6 in a month; similar to the movements of most gold producers. The gold price has come off about 15-20% in US dollar terms over the same period with supply chain and fuel price hikes from the Iran-US war.

Westgold delivered in 1h26 with profit of $314m, maintained FY26 guidance, approved the Higginsville Expansion Plan, secured a new $600m unsecured revolving debt facility, and divested the remaining non-core assets in Valiant Gold which recently listed.

We are maintaining our Spec Buy. WGX has a very strong balance sheet and the flexibility to expand future processing capacity.

Bull Points
- Strong free cash flow generation
- Exploration upside in a resource-rich jurisdiction

Bear Points
- Mine development risk
- High and variable unit costs

Analysis: The expansion of the Higginsville Processing Hub (Eastern Goldfields, WA) is underway from 1.6 million tonnes a year to 2.6Mtpa. The decision follows completion of a Definitive Feasibility Study with key metrics including capital of $145m, reduce unit processing costs by 24% to $34/t and increasing gold production by 60kozpa. This is the key to executing the 3-year plan to increase annual gold production to 470koz by FY28, while reducing costs (AISC) to $2,500/oz.

Ore to be processed at Higginville will be primarily from Beta Hunt, where the mining rate is expected to ramp up to 2Mtpa as infrastructure constraints are removed. There are also future mine-plan additions around the Higginsville/Beta Hunt system if exploration is successful, but this is where future acquisitions would also help fully utilise the plant.

Financially in a strong position, with no debt, hedge-free and cash and bullion increasing $234m over six months to $570m. Has sold non-core assets including Mt Henry-Selene (near Norseman) for $15m cash, $30m deferred consideration and a 19.9% stake in the acquiring company Alicanto (AQI). Completed the Reedy and Comet Projects sale to Valiant Gold (VAL).

ASX: WGX RATING SPEC BUY

Risk

Price ($) 6.285
Market Cap ($M)* 5.938bn
Dividend Yield (%)* 1.1
Net Cash ($M) 570m

***Data as of** 45 minutes ago

*Forecast 7 cents

Radar Rating
Mid-tier WA gold producer at the start of a growth and cost reduction phase.

Portfolio Risk Rating
GROWTH. Gold price is always a risk but strong financial discipline and cash reserves set the stage. Execution of asset integration and cost control is crucial.

Lynas Rare Earths

SECTOR METALS & MINING

INDUSTRY RARE EARTHS

Mining Updates

What's New?
We have had a pretty good run with the stock in the rare earths producer. We were taking profits in October at around $20 in Issue 674, locking in 3-fold returns. Now it is 30% up from the $14.64 price when we returned as Spec Buy in December, Issue 680. That was all about geopolitical developments and processing disruption; both of which are short term in nature. This is all based on the assumption that Lynas remains a strategically vital company for supply chains.

Now that we see LYC at the lower end of fair value, we maintain our Spec Buy. The company has released a slew of announcements in a month confirming the strategic value of being the only commercial producer of separated heavy rare earth oxides (and light rare earths, but not as important) outside China.

Bull Points
- Operations strategically located outside China
- New circuit tocommence'heavy' rare earths

Bear Points
- Opaque market, with China as the dominant player
- Negative free cash flow while expansion projects are being developed

Analysis: The interim (1h26) benefited from product diversity, improved pricing and higher volumes. Revenue rose 63% to $413.7m and profit lifted significantly to $80.2m from $5.9m. Closing cash was $1.03bn after a capital raise that netted $914.3m, delivering balance sheet resilience and the capacity to fund growth initiatives.

This includes the heavy rare earth expansion in Malaysia, to cost $180m and increase the product range that now includes Samarium oxide, dysprosium and terbium. The initial flowsheet includes gadolinium, dysprosium, terbium, yttrium and lutetium within two years.

Commercial contracting has improved materially, beyond pricing based purely on Chinese Rare Earth markets. LYC has been issued a 10-year renewal of its Malaysia operating licence, ensuring supply. The largest contract was the updated JARE agreement to include a firm commitment for 5,000tpa of NdPr with a US$110/kg floor price. Total Rare Earth Oxide sales for the first half were 6,050t. LYC also signed a binding Letter of Intent with the US Department of War for US$96m of rare earth oxide offtake over four years. LYC is developing downstream metal-making capacity to vertically integrate future operations.

ASX: LYC RATING SPEC BUY

Risk

Price ($) 19.701
Market Cap ($M)* 19.829bn
Dividend Yield (%)* 0
Net Cash ($M) 1,030m

***Data as of** 44 minutes ago

Radar Rating
Strategic appeal of the world's largest non-China rare earths producer with major expansion and production diversification in development.

Portfolio Risk Rating
GROWTH. High risk, strategically important rare earth producer. Growth opportunities are capital-intensive but help reducing reliance on an opaque market with supply controlled by China.

Beamtree Holdings

SECTOR HEALTHCARE | INDUSTRY EHEALTH & MEDTECH

Research Tip Updates

Upgrade from Hold

What's New?
A disappointment thus far due to slowing sales progress and ambitions that were not met. Recent developments have seen it halve since its FY25 results. However, the emergence of a new substantial shareholder, the Di Marco family office, has triggered renewed interest. Adrian di Marco is the founder and former CEO of Technology One (TNE), an $8bn software company which has delivered substantial returns for shareholders. The stake building suggests that they see potential in BMT that we were too early to identify. The company welcomed Di Marco in a joint statement with the family's stake increasing from 6.5% to 10.4%.

Bull Points
- Health data opportunity
- New cornerstone investor

Bear Points
- Limited cash flow
- Technology investment needs

Analysis: Di Marco's decision to invest was driven by Beamtree's position as a provider of market-leading AI-enabled healthcare products supporting clinical decision and health system optimisation, and a simplification strategy to streamline operations to support scale, predictability and growth, and enhance focus on core products and markets.

An overly long sentence, but it makes a good point: there is a viable, underutilised and under-valued asset base. Beamtree has a range of new initiatives and a robust pipeline of new prospects to build on its existing annual recurring revenue (ARR) of $28m at December 2025, with profitability supported by ongoing cost discipline. Developments include AI powered autonomous coding solutions, autonomous data entry, a new Evolve platform in the UK expected to start billing for subscriptions imminently, as well as an integrated coding platform developed for Saudi Arabia. While some revenue opportunities may take more time to crystallise than expected, BMT is positioned to start reporting more consistent growth against lower market expectations.

ASX: BMT RATING SPEC BUY

Risk

Price ($) 0.15
Market Cap ($M)* 44m
Dividend Yield (%)* 0
Net Cash ($M) 0.8m

***Data as of** 3 hours ago

PORTFOLIO ACTION!

We will add BMT to the Under the Radar Report portfolio for AI exposure, buying 20,000 at less than or equal to 18 cents at Thursday's close.

Radar Rating

The appearance of a new major investor as well regarded as Adrian Di Marco, CEO of Technology One (TNE), backs up our longstanding interest in BMT, and affirms that its underlying technology is high quality and scalable.

Portfolio Risk Rating

GROWTH. Net current assets are slightly negative, with only $2m long-term debt, so the balance sheet can still support organic growth. Marginally operating cashflow positive in 1h26; needs to accelerate revenue and earnings growth to deliver cash.

UNDER THE RADAR small caps

ISSUE 696
APRIL 2, 2026

Catapult Sport

SECTOR INFORMATION TECH INDUSTRY SOFTWARE

Research Tip Updates

Upgrade from Hold

What's New?
Catapult released a trading update last Thursday which sent the stock up towards $4 intraday, but the subsequent two sessions sent the stock down to below $3. Not the reaction to its Analysts day presentation on Monday management would have expected. CAT's removal from the benchmark S&P/ASX 200 Index last week also had a significant impact; the stock could remain volatile.

We were too early to recommend subscribers take their costs out of CAT at $3.49 in November 2024, after original recommendations just above $1. We have consistently observed that a relatively high valuation leaves little room for disappointment, particularly since it has not yet reported net profit. A $150m capital raise at $6.68 last year provides downward pressure, but the tech company is delivering systemic growth.

Bull Points
• Strong customer engagement
• Global Opportunity

Bear Points
• Still expensive
• Software threats from AI

Analysis: Annual contract value (ACV) expected to be US$134m at the end of March, growth of up to 28% on a constant currency basis, with low churn, but includes contributions from acquisitions of Impect and Perch. Free cash flow will be reduced by the capacity to collect outstanding debtors, but there will still be a cash balance of US$50m, reflecting the large capital raise last year. Growth of 50% in management EBITDA (from $15m in FY25) will also improve performance against the rule of 40 metric. ACV growth + EBITDA margin was 33% in the first half, below the hallowed 40%.

Recent weakness reflected the software sell-off triggered by the anticipation that AI could disintermediate enterprise software providers. This could have a marginal impact, but CAT has proprietary operational data built up over the years, not easily replicable.

Continued on the next page...

ASX: CAT RATING SPEC BUY

Risk

Price ($) 3.475
Market Cap ($M)* 1067m
Dividend Yield (%)* 0
Net Cash ($M) 72.5m

***Data as of** 16 minutes ago

Radar Rating

Hit hard by software valuation questions and index selling. Momentum on key metrics remains positive, assisted by acquisitions, and we are upgrading a rare genuine growth story.

The company targets up to US$1bn ACV over time, or around 8x current levels. This could be achieved through growing pro team clients towards 5k in the next 2-3 years from 3,878 now, then potentially 20k over time. The strategy is to sell Performance and Health solutions into these teams with an average initial value of $20k per team, and then upsell Tactics and Coaching and new solutions to increase the value per team ultimately towards US$100k. The number of multi vertical teams is less than 1000, but still help pull the average for 3900 up to its current US$28k level, and are substantially more profitably than single vertical customers.

Portfolio Risk Rating

GROWTH - Negative net current assets mean CAT uses high-margin recurring revenue to fulfil its contract obligations and fund R&D with limited working capital. An expensive valuation based on a multiple of revenue or ACV will trigger uncertainty in a risk-off environment, because of limited net profitability due to high amortisation charges and share-based payments.

UNDER THE RADAR small caps

ISSUE 696
APRIL 2, 2026

Count

SECTOR FINANCIALS

INDUSTRY WEALTH

Research Tip Updates

Downgrade from Hold

What's New?
This week announced is raising $41m @ $1.05 a share, issuing 20% more shares for 50% more earnings (EBITA) – $35.9m placement plus share purchase plan for up to $5m. Raising is at a slight discount after the shares raced up and is to part-fund the $72m acquisition of financial planning group Oracle Advisory ($64m upfront in cash) – 14 offices in East Australia with about 50 advisers, $8.6m earnings (EBITA) v Count's $16.6m. The purchase is on the expensive side, based on a cash flow valuation in the double-digits versus CUP's mid-single-digit. We are glad we took profits at similar levels in September last year. The company is a compulsive deal maker (9 transactions during the 1h26, on top of Diverger in 2024) and a distribution outlet, hence will always be looking for capital, especially when the shares spike.

Bull Points
• Building scale in a fragmented industry
• Strong free cashflow

Bear Points
• Competition for clients
• Debt from acquisitions

Analysis: The purchase will be negative for earnings per share on our numbers (the company says 11% accretive) owing to the fact that it's more expensive than CUP and synergies are limited to costs (removing back office). CBA (CUP 24%) is not taking part. CUP has $40.2bn in funds under advice & $22.8m in cash. The number of advisers has more than doubled in the past two years to 535 and is the second largest licensee owner in Australia.

CUP provides accounting & wealth management services in Australia through three divisions: equity partnerships (part ownership of accountants & financial planners), wealth (managed accounts & ASIC licence umbrellas) and services (education & admin).

The business is growing better than we expected with its value adding portfolio management service "CARE" boosting funds under management to $5.3bn – up 31.5% a year over the past four years. This stands for Count Active Risk Engine and are multi-asset managed investment portfolios built and run by Count for financial advisers and their clients.

ASX: CUP RATING TAKE $$$

Risk

Price ($) 1.11
Market Cap ($M)* 190m
Dividend Yield (%)* 4.3
Net Debt ($M) 22.5m

***Data as of** 41 minutes ago

*Forecast 4.75 cents

Radar Rating
Count is essentially a distribution hub relying on constant capital raising to grow. Latest acquisition looks dilutive and is big and debt is increasing. Risks are climbing.

Portfolio Risk Rating
GROWTH. The complexity of CUP's structure with its equity interests and dividend income (over 20% of operating cash flow), suggests limits on valuation. $46m in debt another limiting factor. PE in low double digits & dividend yield 4.5%.

UNDER THE RADAR small caps

ISSUE 696
APRIL 2, 2026

Paragon Care

SECTOR HEALTHCARE

INDUSTRY EHEALTH & MEDTECH

Research Tip Updates

What's New?
Paragon Care's stock is bouncing around at record lows just under 20 cents as investors get a handle on the company's $318m+ worth of debt, up from $237m at 30 June last year. The med-tech distributor is paying the price for a hectic merger strategy, which combined three complex businesses in 18 months. The process has been destabilised by a major customer Infinity (a network of 54 franchisee-operated pharmacies branded under Priceline) going broke (Issue 679 Nov 2026). This is far from the end of the story, however. Many stockbrokers believe that there is an opportunity to buy as the debt situation gets worked out in the next few months. This could be the case, but the real opportunity might be at 12 cents, not at the current level of over 18 cents.

If the group can reduce debt and reach its guidance of EBITDA over $100m, this stock should be re-rated. But this work out may involve an equity raising at 10-12 cents a share.

Bull Points
- Wholesaling growth in Asia
- Ongoing synergies

Bear Points
- Low margin business
- High debt

Analysis: Debt is onerous, increasing $82m or 35%. Drivers include Infinity write-off just under $50m, inventory increase due to the shutdown over summer of $21m, cash finance charges $16m, tax $6m, acquisition & PPE $10m. Operating earnings are about $100m, hence net debt/EBITDA sits at 3x. The company aims to reduce the target ratio of 2x, implying net debt of under $200m.

There is a 50:50 chance of a dilutive equity raising in our view in the region of $70-80m, dependent on the outcome of the Infinity liquidation sale, where bids are due in May. $80m factors in equity contributing to the debt refinance ($232m is current or due in the next 12 months).

Assisting in cash flow is the expected reduction in inventory, which includes products associated with the loss of the $230m Ramsay Healthcare contract.

The underlying business is low margin, being in distribution, but the growth engine is definitely Asia, where the growth was organic. PGC's Medical Technology business in this region grew 31% (organic growth alone) during the interim period against the same period a year ago, at 44% gross profit margin.

ASX: PGC RATING HOLD

Risk

Price ($) 0.19
Market Cap ($M)* 315m
Dividend Yield (%)* 0
Net Debt ($M) 287.5m

***Data as of** 40 minutes ago

Radar Rating
A high-risk play but debt should come down and operating earnings drop to the bottom line as recent distribution problems are in the rear-view mirror. The big question is around whether there will be an equity raising, which is line ball at this point.

Portfolio Risk Rating
GROWTH. Scale has been built from several mergers and acquisitions, but dividends further away while integration is completed and debt is managed. Equity capital raising a distinct possibility.

BEST STOCKS TO BUY

The stocks on this list are quality companies that we believe off great return potential for the risk faced.

ACROW FORMWORK (ACF)

SPEC BUY

INDUSTRY	**Contractor**
MARKET CAP	**$274M**
DIVIDEND YIELD	**5.7%**
12 MONTH HIGH	**$1.17**
Price @ 2026-04-1	**$0.88**

NOTES

Has gone through the capex hump to build up its construction and industrial access divisions; now in a period of growth from growing construction activity delivering dividend growth in the lead up to Brisbane '32.

DUG TECHNOLOGY (DUG)

SPEC BUY

INDUSTRY	**Software & Services**
MARKET CAP	**$274M**
DIVIDEND YIELD	**0%**
12 MONTH HIGH	**$2.85**
Price @ 2026-04-1	**$2.02**

NOTES

High risk investment in a niche technology and proprietary hardware provider servicing the oil & gas industry. DUG is well positioned for growth with a record order book, strategic partnerships, and the completion of major growth investments.

ELDERS (ELD)

SPEC BUY

INDUSTRY	**Food**
MARKET CAP	**$1589M**
DIVIDEND YIELD	**4.9%**
12 MONTH HIGH	**$7.91**
Price @ 2026-04-1	**$7.41**

NOTES

Earnings should improve in a cyclical upturn, and the Delta acquisition will provide an additional boost. ELD has key cost out initiatives ahead, and agricultural cycle potential. A new CEO and $200m feedlot sale provide new impetus.

KOGAN.COM (KGN)

SPEC BUY

INDUSTRY	**Retail**
MARKET CAP	**$369M**
DIVIDEND YIELD	**4.2%**
12 MONTH HIGH	**$4.89**
Price @ 2026-04-1	**$3.77**

NOTES

Operating earnings are depressed by restructuring at the NZ business, Mighty Ape. Even after a strong rise following H1 results, KGN is reasonably priced, and has a great business model with substantial upside.

MACQUARIE TECHNOLOGY (MAQ)

SPEC BUY

INDUSTRY	**Services**
MARKET CAP	**$1576M**
DIVIDEND YIELD	**0%**
12 MONTH HIGH	**$72.40**
Price @ 2026-04-1	**$61.09**

NOTES

Margins will improve on growing revenues from increasing utilisation of data centres. The scale of competition is threatening but demand growth is robust.

NANOSONICS (NAN)

SPEC BUY

INDUSTRY	**Med Tech**
MARKET CAP	**$1168M**
DIVIDEND YIELD	**0%**
12 MONTH HIGH	**$5.18**
Price @ 2026-04-1	**$3.85**

NOTES

A high-risk stock which we see as being good value considering the growth pathway for both Trophon upgrades (probe cleaning) and the Coris rollout (endoscope cleaning).

NICK SCALI (NCK)

BUY

INDUSTRY	**Retail**
MARKET CAP	**$1391M**
DIVIDEND YIELD	**4.3%**
12 MONTH HIGH	**$26.08**
Price @ 2026-04-1	**$16.27**

NOTES

NCK has demonstrated the power of its low inventory business model, and we were right to suggest shareholders support the ambitious UK expansion through the SPP in 2024 at $13.25. NCK offers Growth and Income for long term investors.

XRF SCIENTIFIC (XRF)

SPEC BUY

INDUSTRY	**Contractor**
MARKET CAP	**$241M**
DIVIDEND YIELD	**3.0%**
12 MONTH HIGH	**$2.40**
Price @ 2026-04-1	**$1.69**

NOTES

Unique mineral testing technology for mining & industrial; capital light model, high margins, self-funded growth.
