UNDER THE RADAR small caps

ISSUE 699
APRIL 23, 2026

A NEW STOCK SET TO CHARGE UP

Vulcan Energy (VUL) is at the higher end of our risk spectrum, but in a portfolio context, it could act to reduce your risk. The US/Iran war has shown how important energy security is. We've also seen in the past 12 months, following the introduction of the Trump administration tariffs, how important it is for countries to have their own supply of critical minerals. This includes lithium, a primary feedstock for batteries. Certainly, EV orders have been super-charged in the past two months.

Who knows what is going to happen tomorrow, let alone next week? The stocks we introduce you to at Under the Radar will improve your portfolio's risk profile because they are, in many cases, outside the flags, and are stocks where we see value. We are not looking for the flavour of the month. We are looking to make money from undervalued stocks. The biggest determinant of your return, after all, is the price you pay.

Vulcan has operations in the Upper Rhine Valley on the German-French border and is one of the few companies globally that will produce the highest value lithium product for battery manufacture. In contrast, **PLS Group(PLS)**, previously known as Pilbara Minerals, and **Liontown (LTR)** produce a spodumene concentrate, which is only 6% lithium and needs to go through extensive beneficiation or refining, which currently occurs in China. Vulcan's product is much higher value and is closer to one of the biggest growth engines in EVs: Europe. Moreover, the stock has been sold off, having almost halved since last October's peak, but this provides the value that we always seek.

Hazer (HZR) is another stock in the high-risk category, but it is being supported by one of the world's biggest engineering services companies, the Houston-based Kellogg Brown & Root (KBR). Hazer's technology utilises methane pyrolysis and is on the cusp of material contracts, having developed a process design package for industrial-scale production (30,000 tonnes a year). As CEO Glenn Corrie said, "Our global sales force has now increased to 80 executives," when referring to the contribution from KBR.

Investing in small caps is about hitching your wagon onto innovation such as this, but it must be at the right price.

Richard Hemming

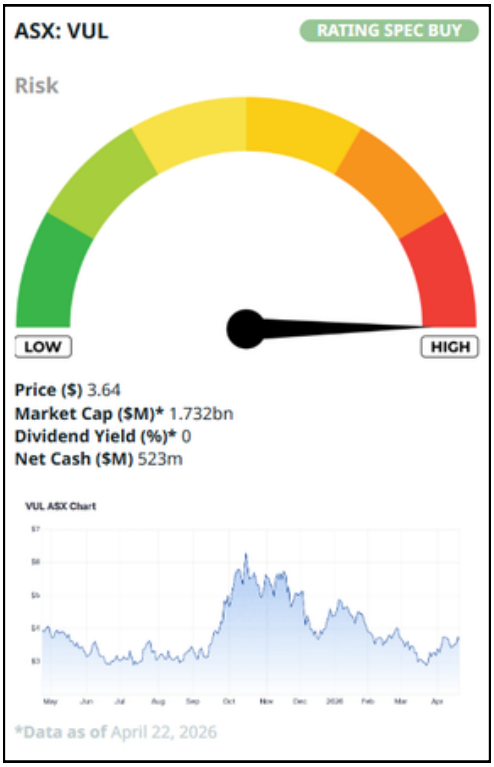
VULCAN ENERGY: Initial Research 23 April 2026

SECTOR MATERIALS | INDUSTRY METALS & MINING



New Coverage!

A high-risk, speculative investment in the world's first integrated direct lithium extraction and geothermal energy project in Germany's Upper Rhine Valley. This project will be producing lithium that can go straight into batteries and is under 3x forecast operating cash flow. Once the project gets into production, we expect a substantial re-rating.

Bull Points
- Permitted, and funded
- Long-life European lithium supply

Bear Points
- Development risk
- Volatile commodity markets

Portfolio Risk Rating

GROWTH. A boom-bust commodity hitting highs on tightening fundamentals. The share price is moving with the underlying commodity prices and will benefit from current prices. Lower financial risk than previously.

Radar Rating

A sustainable growth profile with a world-class deposit. Very high risk, but a large pure-play, low-cost miner, taking advantage of the lithium price.

What's New?
The first phase of commercialisation, Lionheart, is concentrated in and around Landau and Frankfurt in Germany, while the broader development footprint extends into France.

Phase One is in the construction phase, targeting 24ktpa of lithium hydroxide monohydrate (enough LHM for about 500k EV batteries each year for over 30 years) plus 275 GWh of renewable electricity and 560 GWh of heat.

The current feasibility studies are based on the defined reserve of 570kt lithium carbonate equivalent (LCE), which could be extended if any of the 29.1m tonnes of the defined resource are converted resources and mined.

Website www.undertheradarreport.com.au

Funding and Risk
The funding and permitting are in place for capital expenditure of €1,476m. There is a high development risk. Any cost overruns and operational lags may require additional capital and increase initial operating costs. The value of the project is sensitive to lithium extraction and concentration, and there are lithium price and FX volatility to take into consideration. But with operating costs of €3,588/t LHM and pricing of €17,376/t LMH there is plenty of margin to cover some uncertainty, corporate overheads and sustaining capital.

SUPPLY IS NOW THE KEY

Lithium Carbonate (Li2CO3) price in Chinese yuan per tonne over 5 years

The lithium price remains over 70% below its record level in late 2022, reflecting market expansion, with bigger projects coming online. On the other hand, there is now greater supply risk as nations look inwards due to tariffs and wars. With EV expansion is occurring at a very fast rate in Europe, projects like Vulcan's Lionheart in Germany are in the box seat.

SOURCE: Trading Economics

Spending in Detail
Pre-production capital is about €2.2b, €1,476m for construction, €211m financing costs, €197m contingency, €171 million management costs, and €96 million for a Debt Service Reserve Account (security held by the lenders).

Currently, the C1 or cash operating costs are at the lower end of the industry at €3,588/t LHM, comprising power, maintenance, labour, materials, reagents, sorbent, utilities, logistics, and other fixed costs. This doesn't include corporate expenses, and there is no indication of sustaining capital costs. However, with a current LHM price of €17,376/t and the inclusion of €75m of co-product credits from renewable heat and power, margins will be very attractive.

Continued on the next page...

The latest feasibility study figures used for the Final Investment Decision were the average 10-year realised LHM price of €20,456/t. This feel a little optimistic compared to the London Metal Exchange LCE average price for the last couple of months of US$20,500/t or €17,376/t. However, we have a constructive view to future lithium prices and security of a European lithium source. Additionally, if all goes to plan at current prices revenue will be almost €500m once the heat and electricity revenue (€75.1) is included when first lithium production is achieved in 2028.

Offtake Agreements

Our confidence is increased by the certainty of future revenues resulting from offtake agreements with reputable counterparties. This an agreement for Vulcan to supply fixed volumes at certain prices. Phase One offtake partners are LG Energy Solution, Umicore, Stellantis and Glencore. These four accounts have contracted 222 kt of contracted battery-quality LHM over ten years under binding, take-or-pay contracts with agreed pricing mechanisms across six to ten years. The contracted pricing is a basket of 63% floor-ceiling, 9% fixed, and 28% floating volumes over the first ten years, with 72% downside price protection on contracted volumes.

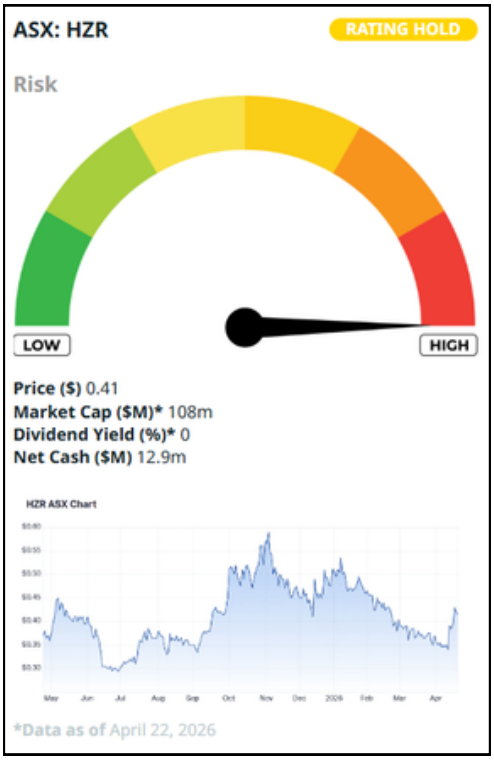
ISSUE 699
APRIL 23, 2026

HAZER: Research 23 April 2026

SECTOR MATERIALS | INDUSTRY MANUFACTURING



Research Tip Updates

What's New?
After trending down following our last report in October (Issue 673) to below 35 cents, Hazer's stock has rebounded on news that the group has completed a material deal with a major global engineering company based in Houston, Kellogg Brown & Root (KBR). Additionally, the group has an agreement with Green Steel in WA to deliver graphite at A$400 a tonne (based on anthracite or high-grade coal benchmarks) which is lucrative on volume.

The group now has a standardized design with a credible partner for a model that bolts on Hazer's hydrogen-producing technology at industrial scale. The process design package or PDP is at 30k tonnes a year. The quarterly released soon after highlights also that Hazer has sufficient cash to keep going, with over $15m in available funds.

Bull Points
- Technology recognition by KBR, patents in the US and Japan
- Massive global market for low-carbon hydrogen

Bear Points
- Potential for competing clean hydrogen technology
- Commercialisation could be slow

Analysis: The capital light business model seems sound so long as commercial deals come through and this deal gives more confidence on that front. The Hazer process uses natural gas or waste gases and produces graphite as a by-product instead of CO2. The process is a 'bolt on' low emissions alternative for both existing (brownfield) and new (greenfield) plants.

As we said in our previous note: the deal flow has been consistent but there needs to be progress on the sales front for recent share price gains to be maintained. This continues to be the case.

Hazer's commercial pipeline is expanding, with 7 projects, but the closest the group is to success is the FortisBC project in Canada, which is still due a financial investment decision. The company said that KBR has been formally engaged on the project to fast-track engineering work and refine project economics.

Radar Rating
The tail winds are blowing but material revenues are still some way away. Highly speculative but promising with adequate medium term funding.

Portfolio Risk Rating
Very high risk but moderate cash. Cash flow from grants, tax rebates and service agreements broadly cover costs. Potential for (more) capital raising high.

ELDERS: Research 23 April 2026

SECTOR CONSUMER STAPLES | INDUSTRY FOODS

Research Tip Updates

Downgrade from Spec Buy

What's New?
The interim (1h26) to 31 March will be released late in May and will include first indications from the $475m Delta Ag acquisition completed on 1 November 2025. We upgraded in the Research Rundown in March (Issue 694). A new CEO, René Dedoncker, from Fonterra, will start in October, but the strategy is unlikely to change dramatically in the short term. As one of the core stocks in our Best Buys, we look at the potential impact from diesel and fertiliser shortages now expected, and what is expected in upcoming results.

Bull Points
- Diversified products and services
- Delta acquisition synergies

Bear Points
- Iran war impacts diesel & fertiliser
- Weather vulnerabilities

Analysis: A solid balance sheet, strengthened further by the $196m sale of the Killara feedlot, which will contribute towards returning to core debt levels after funding the $475m Delta acquisition.

The oil supply shock will create problems for customers, who will have to pass on substantial price increases, more than 50% in fertiliser, and other agrochemicals could also be in short supply. That will affect Elders' volumes, even though higher prices should mean higher dollar margins. Interest rate rises and inflation could have a slowing effect on the real estate business, and substantially increased diesel costs will constrain farmer spend, and may lead to lower medium-term demand. It is too early to tell the long-term effects. There will be an update at the upcoming, but it is the second half that will bear the full frontal impact, and may reduce FY26 earnings expectations. We are therefore downgrading, long-term positive but short-term cautious.

Portfolio Risk Rating

CORE. The Delta Ag acquisition has increased debt. But pre-acquisition net current assets over $350m give a margin of safety in a business with $2.5bn total assets, and the sale of the feedlot business should free up working capital. Elders delivers agriculture exposure & pays partly franked dividends.

ASX: ELD RATING HOLD

Risk

Price ($) 7.45
Market Cap ($M)* 1.594bn
Dividend Yield (%)* 4.8
Net Debt ($M) 278.6m

*Data as of April 22, 2026

*Forecast 36 cents

PORTFOLIO

The Under the Radar Report portfolio purchased ELD at $6.80 at the beginning of February, which has performed relatively strongly despite fresh challenges from the Iran war. We successfully identified the fundamental investment opportunity in ELD over a decade ago, which delivered a ten bagger or more. More recently, ELD is at the middle of its price range for the last three years.

Radar Rating

We remain positive. Earnings should improve in a cyclical upturn, and the Delta Ag acquisition will provide an additional boost. ELD can be a core holding with a good yield but the risks have increased with the oil supply shock.

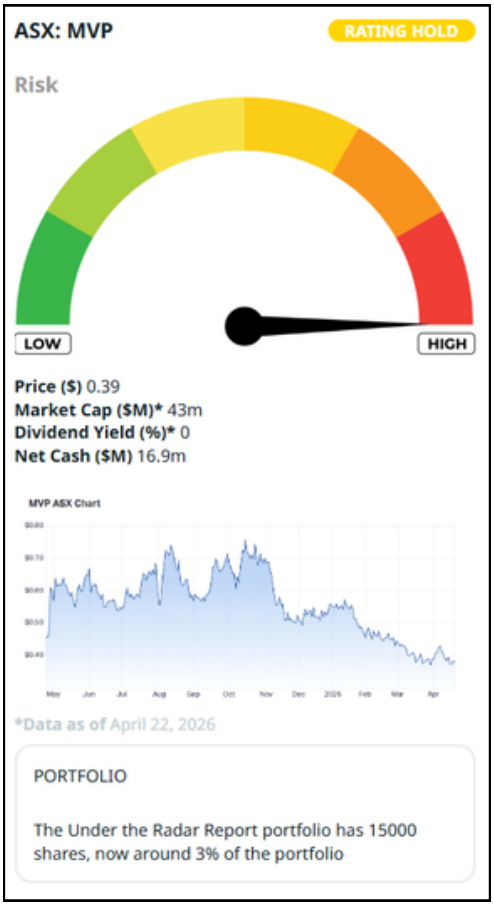
UNDER THE RADAR small caps

ISSUE 699
APRIL 23, 2026

MEDICAL DEVELOPMENTS: Research 23 April 2026

SECTOR HEALTHCARE | INDUSTRY MEDTECH



Research Tip Updates

What's New?
MVP has been a disappointment, illustrating the penalties of paying up for growth which comes through slower than expected. The first half (1h26) showed marginally positive cash flow, driven by 26% Penthrox growth in the hospital segment in Australia, as well as in Europe. Revenue grew 8% to $22m, with 18% growth in pain management, but respiratory was down 10%, from softer demand in the US and some impact from tariffs. Operating earnings (EBITDA) declined $0.8m at $1m, attributed to a $1.1m negative impact on the balance sheet from foreign exchange rate changes.

Bull Points
- Penthrox International potential
- Cash flow positive

Bear Points
- Respiratory business subscale
- Regulatory timeframes

Analysis: Higher volumes in Australia, while realised pricing in France was negatively affected by the transition to a partner distribution model from direct sales. MVP is on a relatively sound financial footing, focusing on accelerating growth. But that has not yet really arrived, except in Australia. As new uses like ambulances and ER are authorised in different countries, growth is anticipated. The UK is expected by August and many European markets are close to authorised. Galen is its partner in UK, Ireland and Nordic, and is ready to go with developed sales strategies.

Studies demonstrate that use of the analgesic Penthrox (aka the green whistle) in hospital emergency departments enables cost savings. MVP is also seeking regulatory approval for paediatric indications in Europe, already approved in Australia. Domestic price increases are expected to improve this half, although weaker demand in respiratory means that second-half earnings will be lower than the first. Accelerating growth in revenue from pain management is anticipated.

Radar Rating

Revenue remains too low, at close to breakeven. MVP's balance sheet remains robust and the pain segment continues to grow. We want to see more progress before we upgrade to buy again, though there is potential from current initiatives.

Portfolio Risk Rating

Raised capital in 2024 at 38 cents, which is funding growth ambitions. The Under the Radar Report portfolio invested more at current prices, but we are still waiting to see concrete progress. Expectations are rock bottom at just over 1x revenues.

UNDER THE RADAR small caps

ISSUE 699
APRIL 23, 2026

SUBSCRIBER PICKS

These are the stocks subscribers ask us about.
We run our investment ruler over them and give you our Radar Diagnosis.

AUSTRALIAN CLINICAL LABS (ACL)

Industry	Healthcare - Pathology Services
Market Cap	$381.4M
Nat Cash/Debt	-$49.8M
Share Price	$2.03
12 Month High	$3.24

NOTES

Healthcare might be defensive but pathology has been doing it tough, highlighted by ACL's earnings downgrade at the interim result in Feb. Debt is growing and operating earnings are declining. Pathology companies are struggling post Covid as volumes fall.

RADAR DIAGNOSIS

This stock will tread water as the model gets reset for lower volumes. HOLD.

BABY BUNTING (BBN)

Industry	Baby Goods Retailer
Market Cap	$208.1M
Nat Cash/Debt	-$9.1M
Share Price	$1.54
12 Month High	$3.29

NOTES

In February we flagged that expectations were too high for BBN for the full year after sales momentum and improving profit margins. The stock has come back more than a third since on no news.

RADAR DIAGNOSIS

The next result is still very important, but valuation looks more sensible. One year forward PE 10x. HOLD.

COVENTRY GROUP (CYG)

Industry	Specialised industrial Products & Services
Market Cap	$52.2M
Nat Cash/Debt	$5.1M
Share Price	$0.38
12 Month High	$0.96

NOTES

Fluids business offers industrial hydraulics and lubrication services, while trade distribution offers industrial products from up to 80 locations across ANZ. Going through a strategic review in order to turn operations around after a $30m loss in FY25 & $10m in 1h26. Nascent EBITDA momentum in recent update.

RADAR DIAGNOSIS

A poor interim result; will struggle to turn a difficult situation around. HOLD.

IMMUTEP (IMM)

Industry	Biotechnology - Cancer Therapy
Market Cap	$106.1M
Nat Cash/Debt	$72.7M
Share Price	$0.07
12 Month High	$0.47

NOTES

We have been right to avoid this cancer therapy specialist, which has consistently raised cash. On the current run-rate it will be asking for more before the year is out. Last month its leading drug Efti for lung cancer essentially failed in late stage trials for this indication. This is one of three core drug candidates in clinical trials for IMM.

RADAR DIAGNOSIS

A serial capital raising company. If you invest, keep positions very small; no more than 1% of your portfolio. HOLD.

UTR report

Website www.undertheradarreport.com.au

MONASH IVF (MVF)

Industry	Healthcare - IVF services
Market Cap	$288.3M
Nat Cash/Debt	-$94.5M
Share Price	$0.74
12 Month High	$0.90

NOTES

Opportunistic PE bid - Soul Patts and Genesis Capital - lifted from 80c to 90c a share - rejected on arrival. The discount reflects that without management approval there is great uncertainty.

RADAR DIAGNOSIS

If you own it, hold on. HOLD.

PLENTI GROUP (PLT)

Industry	Fintech - Loans
Market Cap	$177.6M
Nat Cash/Debt	$52.7M
Share Price	$0.98
12 Month High	$1.65

NOTES

Car and renewable energy loans through brokers, including OEM (manufacturing) loan packages for Tesla and a partnership with NAB. Focuses on prime borrowers and has funded 70k vehicles. Financial metrics are moving in the right direction, including cash net profit, which climbed to $12.8m for the interim (1h26) from below $1m in the pcp. Lending growing; loan portfolio at $2.83bn (up 24%). Now in position to pay tax.

RADAR DIAGNOSIS

Momentum is impressive and due to EV trend. Vulnerable to disappointment due to small size. HOLD.

POINTSBET (PBH)

Industry	Gaming
Market Cap	$338.9M
Nat Cash/Debt	$24.5M
Share Price	$0.98
12 Month High	$1.31

NOTES

Revenues growing at low single-digit rates but costs growing faster. Not profitable, even at operating earnings (EBITDA) & cash flow from operations negative. Effectively being taken over by MIXI - own 66.4% - Japanese digital company.

RADAR DIAGNOSIS

Peaked in Covid. Minority shareholders vulnerable. AVOID.

READYTECH (RDY)

Industry	Software - Education
Market Cap	$173.0M
Nat Cash/Debt	-$41.5M
Share Price	$1.40
12 Month High	$2.80

NOTES

Services education workforce and aims to broaden offering but difficult to appreciate its business model. Has been hit in AI-software rout. Revenue growth low single-digits exceeded by expenses growth, causing losses. Balance sheet is getting weaker as cash reserves fall. Operating cash flow positive, but due to high capital expenditure, negative free cash flow.

RADAR DIAGNOSIS

Now a 'show me' stock. Looks interesting. HOLD.

STRICKLAND METALS

STK

Industry	Specialised industrial Products & Services
Market Cap	$540.1M
Nat Cash/Debt	$66.3M
Share Price	$0.21
12 Month High	$0.26

NOTES

Gold and Base Metal Exploration play in Serbia. Significant resource already defined and a recent capital raise will fund further resource delination and scoping studies. Institutional placement to raise $55m @$0.16/share to progress PFS due in H1 CY27, an additional 70,000m drill programme in CY26 with the aim of supporting mining studies and delivering updated Resource estimates in CY26. Located in the heart of one of Europe's largest base metal mining centres – Trepca Mineral Distric.

RADAR DIAGNOSIS

Early stage but big valuation. WATCHLIST.

VIVA ENERGY

VEA

Industry	Fuel Refining, Distribution
Market Cap	$3851.7M
Nat Cash/Debt	-$2100.0M
Share Price	$2.35
12 Month High	$2.69

NOTES

Supplies a quarter of Australia's fuel volume and has pivoted via acquisitions to convenience retail (ColesExpress). Refinery capacity 120kbpd, retail supplies 1300+ sites. Last week experienced fire in Geelong Refinery - expects to be producing diesel and fet fulll at 80% capacity, petrol 60%. Has fuel stocks to cover reduced production. Fires in refineries are not uncommon.

RADAR DIAGNOSIS

The fire caused a 10% sell off and puts the stock on a dividend yield of 7%, although this declines over time. We're still positive on the long-term outlook due to national importance. HOLD.

BEST STOCKS TO BUY

The stocks on this list are quality companies that we believe off great return potential for the risk faced.

ACROW FORMWORK (ACF)

SPEC BUY

Industry	Contractor
Market Cap	$308M
Dividend Yield	5.1%
12 Month High	$1.17
Price @ 2026-04-23	$0.99

NOTES

Has gone through the capex hump to build up its construction and industrial access divisions; now in a period of growth from growing construction activity delivering dividend growth in the lead up to Brisbane ’32.

DUG TECHNOLOGY (DUG)

SPEC BUY

Industry	Software & Services
Market Cap	$275M
Dividend Yield	0%
12 Month High	$2.85
Price @ 2026-04-23	$2.03

NOTES

High risk investment in a niche technology and proprietary hardware provider servicing the oil & gas industry. DUG is well positioned for growth with a record order book, strategic partnerships, and the completion of major growth investments.

KOGAN.COM (KGN)

SPEC BUY

Industry	Retail
Market Cap	$385M
Dividend Yield	4.1%
12 Month High	$4.89
Price @ 2026-04-23	$3.93

NOTES

Operating earnings are depressed by restructuring at the NZ business, Mighty Ape. Even after a strong rise following H1 results, KGN is reasonably priced, and has a great business model with substantial upside.

MACQUARIE TECHNOLOGY (MAQ)

SPEC BUY

Industry	Services
Market Cap	$1848M
Dividend Yield	0%
12 Month High	$72.40
Price @ 2026-04-23	$71.62

NOTES

Margins will improve on growing revenues from increasing utilisation of data centres. The scale of competition is threatening but demand growth is robust.

NANOSONICS (NAN)

SPEC BUY

Industry	Med Tech
Market Cap	$1080M
Dividend Yield	0%
12 Month High	$5.18
Price @ 2026-04-23	$3.56

NOTES

A high-risk stock which we see as being good value considering the growth pathway for both Trophon upgrades (probe cleaning) and the Coris rollout (endoscope cleaning).

NICK SCALI (NCK)

BUY

Industry	Retail
Market Cap	$1310M
Dividend Yield	4.6%
12 Month High	$26.08
Price @ 2026-04-23	$15.32

NOTES

NCK has demonstrated the power of its low inventory business model, and we were right to suggest shareholders support the ambitious UK expansion through the SPP in 2024 at $13.25. NCK offers Growth and Income for long term investors.

XRF SCIENTIFIC (XRF)

SPEC BUY

Industry	Contractor
Market Cap	$266M
Dividend Yield	2.7%
12 Month High	$2.40
Price @ 2026-04-23	$1.86

NOTES

Unique mineral testing technology for mining & industrial; capital light model, high margins, self-funded growth.
