UNDER THE RADAR small caps

ISSUE 700
APRIL 30, 2026

WELCOME TO OUR 700TH ISSUE!

The key to making money has always been fundamental analysis and it's how we spot and take advantage of the ever-changing world of stock market investing. We first kicked off Under the Radar in 2011 and our strategy remains the same: Buy Cheap and Be Patient!

Our system also remains: look at the balance sheet first, move onto cashflow, then the profit and loss. But within this, we pay close attention to the quality of the customers, the strategic position of the business and the track record of management.

You will see the fruits of this strategy in our Performance Review, whose highlights include an average return on our different portfolios of close to 20% a year in recent years and an average return on over 300 stocks tipped of almost 100%. Our Best Buys average returns are even better, and we've just added **Paladin Energy (PDN)** to that list.

How do we do it? Most theories of finance say that in order to get bigger returns, you need to go up the risk curve. But with the rise and rise of the passive investing via index-linked ETFs this is no longer the case. The crowd effect eliminates the possibility of getting a discount at the big end of town.

In contrast, the market can overlook qualities such as a strong balance sheet or a superior business operating model and ascribe a higher level of risk to a smaller company, which in fact has lower financial and operating risk, but retains the potential to deliver higher returns.

We are finding better value in stocks in smaller companies because there are simply not the analysts researching these stocks. We are able to use our system to give you opportunities at all stages of the investment cycle. This is what under the radar is about.

Richard Hemming
Founder

NUCLEAR & URANIUM ANALYSIS: PROFITING FROM VOLATILITY

Uranium's positive trends continue and we are finding ways for members to profit. Read this analysis, which highlights improving fundamentals, then we get into stock specifics.

Boss Energy (BOE) ↑ SPEC BUY
Bannerman Energy (BMN) ↑ SPEC BUY

PERFORMANCE REVIEW

NUCLEAR & URANIUM ANALYSIS: Profiting From Volatility

Uranium's positive trends continue and we are finding ways for members to profit. Read this analysis, which highlights improving fundamentals, then we get into stock specifics.

FINDING EQUILIBRIUM

5-year uranium oxide (U_3O_8) price in US$ per pound

The uranium spot price has stabilised this year and continues its upward trajectory. A driver is fundamental demand with utilities re-contracting at higher prices with reported long-term contract prices of $93/lb and Cameco disclosing long-term price ceilings of up to US$150/lb.

This type of activity has been expected since long-term contracting volumes in 2025 of 116Mlb fell well short of replacement volumes.

Uranium Investment Summary

We were happy to trim our positions in February as the spot price of uranium touched $100/lb. All of our uranium coverage have come off highs since and are now trading in line with fundamentals. Producers, **Paladin Energy (PDN)** and **Boss Resources (BOE)**, are primed to rebound, alongside higher-risk developer **Bannerman Energy (BMN)**.

These fundamentals are based on a structurally tight uranium market, with declining inventories and increased reactor demand to meet replenishment requirements. We see this remaining in place for the next couple of years for several reasons including:

- Companies running large AI data centres are making long-term commitments to buy electricity generated from nuclear power, specifically from Small Modular Reactors;
- Life extensions of existing US reactor fleet;
- Major new reactor builds in Asia;
- Prohibiting Russian Uranium Imports Act (effective to 2040);
- Supply constraints.

The Detail: Comparisons

All the projects in our coverage universe have strengths, weaknesses and use different mining and processing methods. They have all had successes and failures progressing project in production and in development. **Bannerman Energy (BMN)** has been the best performer although it has been volatile.

Here is a comparison of key technical, economic and operating metrics for major uranium projects.

Major Uranium Projects	Honeymoon	Etango-8	Langer Heinrich ($PDN)	Kayelekera
Country:	Australia	Namibia	Namibia	Malawi
Ownership:	Boss Energy $BOE (100%)	Bannerman Energy $BMN (52%)	Paladin Energy $PDN (75%)	Lotus Resources $LOT (85%)
Mining Method:	In-situ Recovery	Open pit + heap leach	Open pit + mill	Open pit + mill
Status in 2026:	Operating / ramp-up	Permitted / DFS	Operating / ramp-up	Restarted / ramp-up
Annual Production (Mlb):	1.6	3.5	4.5	2.4
Mine Life (years):	10	15	17	10
Resources (Mlb U3O8):	71	207	200	51.1
Average Grade:	65–80 mg/L	240 ppm	520 ppm	300–400 ppm
Operating Cost (US$/lb):	24	35	44	40
Costs (AISC in US$/lb):	67	38	46	45
Initial / Restart Capex (US$m):	Low	345	Funded	50

Key Stock Takeouts

Paladin Energy (PDN) ↑ SPEC BUY

Langer Heinrich (Namibia)
The most established asset with existing infrastructure and restart momentum. It also offers meaningful expansion potential, which supports its higher valuation. Overall, this is viewed as the lowest-risk uranium exposure among the group.

Boss Energy (BOE) ↑ SPEC BUY

Honeymoon (South Australia)
A low-cost ISR (in-situ recovery) operation, benefiting from its resource type and mining method. However, ISR can carry greater operational variability, meaning confidence in consistent production is somewhat lower.

Bannerman Energy (BMN) ↑ SPEC BUY

Etango-8 (Namibia)
A globally significant resource base, making it one of the most scalable uranium projects. The trade-off is higher development and execution risk, given its size and capital requirements.

Lotus Resources (LOT) HOLD

Kayelekera (Malawi) HOLD
A restart story with smaller scale relative to peers. Carries elevated risk due to development and resource size. It needs to establish supply chain security.

BOSS ENERGY: Research 30 April 2026

SECTOR METALS & MINING | INDUSTRY URANIUM NUCLEAR

Nuclear Updates

Upgrade from Hold

What's New?
A downgrade of production guidance this month has added to the string of disappointing developments at the Honeymoon project this year. Boss is now trading at a third of the level in mid-2025, when the problems started. With a strong uranium market, we see value and an upgrade to spec buy.

Third quarter (3q26) production was 203klbs, well below the guidance range of 240-270klbs and due to unseasonable rainfall disrupting road access, site operations and infrastructure commissioning delays. To meet the revised guidance of 1.40–1.45Mlbs 4th quarter production must reach 356-406klbs, very achievable under normal conditions.

Later this week, $BOE releases its quarterly report and despite the low volumes produced we expect positive operating cash flow considering the high prices available over the quarter and a likely run down of inventory.

Bull Points
- Producing in a market with positive fundamentals
- Strong balance sheet

Bear Points
- Uncertainty on Honeymoon's nameplate production
- Cost and capital impact from revised Honeymoon operations

Analysis: Boss continues to produce strong fundamentals despite production issues. Interim revenue to 31 December was almost $82m on production of 842klbs of U_3O_8, with sales of 750,000 lbs at an average realised price of approximately US$74 per pound. This resulted in a positive operating cash flow of $36.2m.

Radar Rating
A production downgrade had dented credibility further, but uranium prices are high, mine infrastructure is in place, and there is cash to reevaluate Honeymoon.

ABN: 65147404662. **AFSL**: 409518
Website www.undertheradarreport.com.au

The balance sheet is strong with $208m in cash and includes inventory of 1,615klbs of drummed uranium, valued at $110m. Net tangible assets per share are $1.14, 75% of the current market valuation.

FY26 Honeymoon production guidance is now 1.40–1.45mlbs. Critically, cost guidance was maintained with cash (C1) costs expected at the upper end of $36–40/lb.

Positive developments included an updated JORC resource statement and permitting pathway for the satellite deposits adjacent to Honeymoon, Goulds Dam and Jason's Deposit.

Portfolio Risk Rating

GROWTH. Risk remains extremely high with the company now very exposed to uranium price volatility. Although it does have cash, inventory and another operation Alta Mesa.

BANNERMAN ENERGY: Research 30 April 2026

SECTOR METALS & MINING | INDUSTRY URANIUM NUCLEAR

Nuclear Updates

Upgrade from Hold

What's New?
Funding is now in place for the Etango Project in Namibia, a massive development. But all things come with a cost, which in this case is 42.75% of the project. The joint venture is with China National Nuclear Corp (CNOL), one of the world's largest integrated nuclear power groups. CNOL will invest up to US$294.5m into the JV company and reimburse BMN US$27 for 45% of the capital spent to date. The transaction also includes a binding life-of-mine offtake for 60% of Etango production with pricing linked to term and spot uranium price indices.

There are regulatory risks as there are some changes to existing agreements and shareholder approval is required before completion, targeted by mid-2026.

We are upgrading to a Buy as this significantly de-risks the project and provides long-term exposure to uranium's fundamentals.

Bull Points
- Large-scale project
- Funding secured

Bear Points
- Development Risks
- Uranium market volatility

Analysis: On balance, a good result, strengthening the balance sheet, ensuring the project will be debt-free, and minimising BMN dilution. Upon completion, the economic ownership of Etango will be 52.25% Bannerman, 42.75% CNOL, and the Namibian social welfare organisation One Economy Foundation 5%.

Early works are over halfway complete; first production on track for 2028. BMN to continue ordering long lead items such as the high-pressure grinding rolls (HPGR) for the tertiary crusher which has been delivered to the site.

Progressing to Final Investment Decision with a strong liquidity position, $89m in cash (31/12/25). The additional US$27m places BMN in a position to fund it 55% of the remaining US$60m of development capital and working capital required. CNOL will fund 45%.

Radar Rating
Fully funded and permitted uranium project that is progressing well to supply a market with strong fundamentals.

Portfolio Risk Rating
GROWTH. High levels of development and commodity risk as one of the world's largest advanced uranium assets progresses. It will be a low-cost operation, with a long mine life, and exploration potential.

8 New Stocks: in 12-months

More than one every six weeks!

**Performance of our 8 new stocks in the past 12 months is strong.
But it's too early to judge them. Remember, Buy Cheap and Be Patient!
Is our catchcry and our weapon as investors.**

Westgold Resources (WGX): 89.7% Return

SPEC BUY

Industry	Gold
DATE TIPPED	5/06/2025
Price Tipped	$3.12
Latest Price	$5.92

Mid-tier WA gold producer at the start of a growth and cost reduction phase.

Appen (APX): 40.9% Return

HOLD

Industry	Software & services
DATE TIPPED	10/07/2025
Price Tipped	$1.125
Latest Price	$1.585

The AI services group has some way to go, but the climb has been steep and more data will be needed to confirm China's potential.

Fluence Corp (FLC): -10.0% Return

SPEC BUY

Industry	Contractor: water
DATE TIPPED	6/11/2025
Price Tipped	$0.10
Latest Price	$0.09

High risk, but exposed to water treatment where there is high demand, barriers to entry but large competitors. For those willing to be patient, system growth starting to occur along side recurring revenue. Keep positions small.

Calix (CLX): 31.8% Return

SPEC BUY

Industry	Manufacturing
DATE TIPPED	13/11/2025
Price Tipped	$0.44
Latest Price	$0.58

A high risk investment with significant growth potential as its technology is proven on a commercial scale. Focused on commercialisation and expanding global partnerships but expect road bumps as the technology is validated.

8 New Stocks: in 12-months

Camplify (CHL): -26.6% return

SPEC BUY

Industry	Software & Services
DATE TIPPED	4/12/2025
Price Tipped	$0.32
Latest Price	$0.235

Sales need to improve but the group is tracking in the right direction with demand for caravan usage improving and an innovative insurance model kicking off. Undervalued but patience needed.

DUG Technology (DUG): 11.8% return

SPEC BUY

Industry	Software & services
DATE TIPPED	11/12/2025
Price Tipped	$1.985
Latest Price	$2.22

High risk investment in a niche technology and proprietary hardware provider servicing the oil & gas industry.DUG is well positioned for growth with a record order book, strategic partnerships, and the completion of major growth investments.

Sun Silver (SS1): -36.3% return

SPEC BUY

Industry	Silver miner
DATE TIPPED	12/02/2026
Price Tipped	$2.01
Latest Price	$1.28

High risk; early-stage silver developer in Nevada, US, with exposure to a volatile critical commodity. Keep positions small.

Vulcan Energy (VUL) : 9.4% Return

SPEC BUY

Industry	Lithium
DATE TIPPED	23/04/2026
Price Tipped	$3.625
Latest Price	$3.965

High risk investment in early-stage European lithium project which has big potential but also development and lithium price risk.

BEST STOCKS TO BUY

The stocks on this list are quality companies that we believe off great return potential for the risk faced.

ACROW FORMWORK (ACF)

SPEC BUY

Industry	Contractor
Market Cap	$285M
Dividend Yield	5.5%
12 Month High	$1.17
Price @ 2026-04-29	$0.92

NOTES

Has gone through the capex hump to build up its construction and industrial access divisions; now in a period of growth from growing construction activity delivering dividend growth in the lead up to Brisbane ’32.

DUG TECHNOLOGY (DUG)

SPEC BUY

Industry	Software & Services
Market Cap	$301M
Dividend Yield	0%
12 Month High	$2.85
Price @ 2026-04-29	$2.22

NOTES

High risk investment in a niche technology and proprietary hardware provider servicing the oil & gas industry. DUG is well positioned for growth with a record order book, strategic partnerships, and the completion of major growth investments.

KOGAN.COM (KGN)

SPEC BUY

Industry	Retail
Market Cap	$368M
Dividend Yield	4.3%
12 Month High	$4.89
Price @ 2026-04-29	$3.76

NOTES

Operating earnings are depressed by restructuring at the NZ business, Mighty Ape. Even after a strong rise following H1 results, KGN is reasonably priced, and has a great business model with substantial upside.

MACQUARIE TECHNOLOGY (MAQ)

SPEC BUY

Industry	Services
Market Cap	$1809M
Dividend Yield	0%
12 Month High	$72.40
Price @ 2026-04-29	$70.12

NOTES

Margins will improve on growing revenues from increasing utilisation of data centres. The scale of competition is threatening but demand growth is robust.

NANOSONICS (NAN)

SPEC BUY

Industry	Med Tech
Market Cap	$1072M
Dividend Yield	0%
12 Month High	$5.18
Price @ 2026-04-29	$3.54

NOTES

A high-risk stock which we see as being good value considering the growth pathway for both Trophon upgrades (probe cleaning) and the Coris rollout (endoscope cleaning).

NICK SCALI (NCK)

BUY

Industry	Retail
Market Cap	$1288M
Dividend Yield	4.6%
12 Month High	$26.08
Price @ 2026-04-29	$15.07

NOTES

NCK has demonstrated the power of its low inventory business model, and we were right to suggest shareholders support the ambitious UK expansion through the SPP in 2024 at $13.25. NCK offers Growth and Income for long term investors.

PALADIN ENERGY (PDN)

SPEC BUY

Industry	Uranium/Nuclear
Market Cap	$5338M
Dividend Yield	0%
12 Month High	$15.10
Price @ 2026-04-29	$11.88

NOTES

Improving grades and significant production profile, which will improve cashflow. Uranium price action is positive.

XRF SCIENTIFIC (XRF)

SPEC BUY

Industry	Contractor
Market Cap	$273M
Dividend Yield	2.6%
12 Month High	$2.40
Price @ 2026-04-29	$1.91

NOTES

Unique mineral testing technology for mining & industrial; capital light model, high margins, self-funded growth.
